

Source of Vegetable Replacement ??

----- *In A World Out of Balance*

Nowadays, our diet is low in green leafy vegetables. Lack of chlorophylls intake, which can be found abundant in vegetables, may lead to toxic accumulation from our daily activity and lifestyle. Staying and working in the hustle-bustle of the city surrounded by vehicle's smoke and eating unhealthy food are harmful to our internal health and may lead to poor skin complexion. Skin complexion is a mirror of internal health and it is closely regulated by hormones especially for women. Imbalanced internal systems lead to skin allergy, pale faces, formation of wrinkles and acceleration of skin aging process.

As an alternative source of high quality protein and green vegetables -- **Spirulina**, a blue-green algae, providing extraordinary nutrients such as **protein, amino acids, chelated minerals, varies vitamins and pigmentations** [chlorophyll (green), phycocyanin (blue) and beta-carotene (yellow)].

Essential Nutrients and Functions of Spirulina

The *essential nutrients and functions* which can be found in Spirulina are as follows :

- ♠ Green element (***Chlorophylls***) - aids in the elimination of toxin and gently cleans blood waste.
- ♠ **Good Quality Protein** – spirulina has an impressive 60-70% protein content. By comparison, spirulina produces twenty times more protein per acre versus soybeans.
- ♠ Essential Fatty Acids - rich in ***gamma-linolenic acid (GLA)*** - aids in the health of the joints and heart. It is also helpful for specific issues like weight loss and premenstrual syndrome (PMS).
- ♠ Vitamins - ***vitamins A, C, E*** and ***B-complex vitamins***, including vitamins B12 and B6.
- ♠ Various minerals – contains ***potassium, calcium, chromium, copper, iron, magnesium, manganese, phosphorus, selenium, sodium and zinc.***
- ♠ Color pigments
 - chlorophyll.
 - ***phycocyanin*** - unique blue-green colour may help improve immune system and it has anti-cancer properties.
 - ***Beta carotene*** - Spirulina's beta carotene is ten times more concentrated than carrots. It helps to support your body's antioxidant defenses and is good for healthy eyes and vision.

Feel good inside and look good outside...

Add Spirulina to your daily diet to supplement the power of the good food you eat. In spite of their nutritional punch, blue-green algae and spirulina **do not** pack a lot of calories. This makes it effortless to incorporate the spirulina into weight loss diet regardless of your nutritional needs and preferences.

However, it is not an appetite suppressant. It contains no drugs that trick our body. Yet, many people find that taking a few tablets of spirulina half or an hour before mealtime can help satisfy appetite. Thus, they may eat less. Because it is rich in nutrients and has low calories, spirulina is an ideal support for any diet.

Powerful Combination of Spirulina + Bee Pollen

Constant consumption of both Bee Pollen and Spirulina may lead to the maintenance of a fit and ideal body weight while reducing the aging symptoms and processes simultaneously. With the detoxification effect from Spirulina and Bee Pollen as a nutritious complete food, our skin and inner body can be nourished with the essential minerals and vitamins to become more energetic, lively, shining and even look younger with a more radiant complexion.

DXN Spirulina

- Spirulina is a type of blue-green algae which is full of life-giving nutrients.
- Source of protein, beta carotene, chlorophyll, vitamin B complex, minerals, essential fatty acids and other important nutrients that our body needs.
- It is different from other algae because it is easily digested and absorbed by the body.
- One of the best alkaline food, which helps to change weak acidic body condition to a healthy alkaline one.
- DXN is the first MLM company in Malaysia to produce Spirulina from the cultivation process to finished goods.
- No pesticides or herbicides are applied.
- It is available in tablet and capsule forms to suit your needs.
